Description

My project helps people who are traveling and want to workout. It shows them workouts based on the equipment that they have available.

Features

- Database of workouts
- Login feature
- api

Planning - User Stories

- Story 1: A program that helps me look up workouts
- Story 2: A program to look up workouts based on my equipment
- Story 3: A way for me to save the workouts for later reference

Planning - Database

I will have a database with different workouts and a database with names of workouts. The user will input what equipment they have available and it will be matched with the workouts that have those items. I will also have a database for the workouts they used to be saved for future reference.

Technology Stack

- C# Language
- Entity Framework
- DbContext
- SQL Server

Demo

What I Learned

- I am still working on all my features, so I am still learning about all the parts of my project.

What's Next

- Possible rating of workouts done
