Description

There is always demand for skilled professionals for homeservices, and are not easily accessible . This application serves as a free platform for people who are seeking and rendering home services.

It provides user an online register form and gives access as a pro or customer.

Features

- The suggestions for the Home services are displayed in the home page.
- Anybody can register by filling the form as a pro or customer.
- The list of customers or pros and their contact details can be viewed.

Planning - User Stories

- Users can fill in their registration form as a pro or customer with their details.
- Users then use their email and can log in via Google Auth.
- Users can check for their names in their respective list.
- Logged-in user can view the saved list of customers and pro in separate page.

Planning - Database

Demo

What I Learned

- CRUD library, provides the functions necessary for persistent storage application
- Programming a data transfer object(DTO) , for transferring data between processes.
- How to use Google Authentication
- Handling project as a team and executing it.

What's Next

- Editing the User details by choosing the profile
- Display the details of a particular pro or customer when selected
- Adding animations
- Learning something else new!
