Description

The StyleStorm project will allow people to get instant feedback on whether a style is appropriate for various situations.

This project is being created as a stand in for those who don't have or are lacking a social consciousness and would like some opinions on their style related choice.

Features

- User's will have their own profile where they can manage their activity with other users and view their previous posts...Users will be able to register and log in.
- Style your Event: Create, draft, publish, and edit posts: Users will be able to create new posts in the system by entering in a mixture of required(title, description) and optional.
- Stormer Chasing: Will follow other users.
- Delete/Private posts: Users will be able to delete posts.

Planning - User Stories

I can login-done

I can register as a new user-done

I can make a post--in progress

I can add a tag to a post--in progress

I can follow other users(Stormers)--in progress

Planning - Database

User- fields(id, pw_hash, username)

Post-fields(id, name, user_id)

Tag-fields(id, description, name)

post_tags - fields(posts_id, tags_id)

Technology Stack

- Java
- SpringBoot
- Thymeleaf
- mySQL
- BootStrap
- HTML/CSS

Demo

What I Learned

- creating a user registration and login

What's Next

- Finish database models/controllers/classes/relationships
- Utilize the user login info to create a profile and follow users
- Learning something else new!
