

# Vacation Planner

Kenya Caldwell

<https://github.com/CoderGirlKenya>

# Description

Allows user to log desired vacation destinations with an outdoor, tour, and food activity

# Features

- List desired vacations to make booking travel easier
- Handy list of necessities available providing a list of travel needs

# Planning - User Stories

Inspired by the desire to travel and not knowing where to start and what to do

Handy to anyone interested in planning travel

# Planning - Database

Functionality available to add and remove from list

# Technology Stack

- Reactjs
- BootStrap 4.6.0
- React-Router-Dom
- JSON storage bin

# Demo

# What I Learned

- How to create components
- How to pass props through components using props and Global Context hooks
- Navigation and routing
- Fetching API data
- Removing and adding fetched data to and from list
- Form validation and submission

# What's Next

- Remove necessities if checked
- Add Google Maps and Google Places API to provide location details for user within app
